

WMDD 4815 Mock Final Exam Instruction

Created by Tomoko Okochi

Preparation

1. Move the screenshots folder to outside of the starter files folder so that you will not have it inside the submission folder.
2. Rename the starter files folder to **mockfinal4815_yourfirstname_yourlastname**
3. Open the folder in VS Code
4. Watch a video at <https://www.loom.com/share/5743a78aa6db4e389d9cf13eeec0b126> to see the outcomes

HTML

- The starter file only contains text and article images. Add HTML tags so that the page displays properly. If you prefer to create a new html file first and then copy and paste the text, you can do it. In that case, don't forget to remove the original index.html file and rename the new file as index.html.
- Add Semantic tags as needed.
- Remove all the comments that were already there on the starter files including the one that says
<!-- comment inserted for editing purpose -->
- You can use a live server extension while working. But make sure to test all the links by opening the index.html file from the finder before submitting your work as the live server extension works around wrong relative paths.
- You do not need to implement any action for the menu and search icons.

Colours and fonts

- You can find information about fonts and colours on the style.css file.
- Define the font sizes and colour gradient so that it is closer to what you see on the screenshots.

Background image

- Use top-ballet.jpg for the hero section background.

Styling

- You can write CSS code on style.css. For styling that is specific to vote.html (styling that only applies to vote.html), use vote-style.css.
- Organize the CSS code with comments, so it's easily understandable for anyone who reads your code.
- Treat screenshots as if they are mockups dropped by a designer. Try to replicate the design as much as possible. Pay attention to alignments of items both vertically and horizontally.
- The breakpoint for tablet view should be set at 800px. For desktop view, it should be set at 1100px.

Submission

Note: You don't actually submit this mock exam, but practice the process below and time how long it takes.

- Validate HTML and CSS files. Take screenshots of validation results. Add those screenshots in a folder called **validation** and put the folder inside your submission folder.
- Compress the submission folder in zip format. Make sure the screenshots folder is NOT included.
- ~~Submit the zip file to the Brightspace assignment folder.~~
- Start the submission process at least 10 minutes before the deadline as it may take some time to upload your file.
- Any submission past the deadline will not be accepted as this is an exam.

Grading

- HTML format (structure, semantic tags, accessible icons, proper class names) - 20
- Mobile view layout - 20
- Tablet view layout - 5
- Desktop view layout - 20
- Vote page functionality and layout - 20
- Fonts, colours, images - 10
- HTML and CSS validation - 5
